

Universe Mobile

Android and IOS

Universe for Mobile - Android and iOS

Product Sheet

Stay in touch easily and conveniently wherever you are

Universe is an advanced unified communications product that has been developed by Firstcom Europe. Universe for Mobile enables your staff to always be within reach. Their mobile device becomes a company phone wherever they are, maximizing mobility and keeping costs down.

Using one number for all devices, it is possible to answer a voice call from the device you choose, fixed line, computer, or mobile phone. Your minutes bundle is spread across all devices and there is no restriction on the proportion of minutes you use on each.

So, if you want the convenience of single push button technology, then the business phone may be the right choice for you. If you want to be hands free so that you can use your computer and share screens while on the call, using Universe for Windows and Mac , may be the best one for you. Alternatively, if you are on the go and want to stay in touch, Universe for Mobile gives you freedom to move around.

Cost effective - great call rates and no extra charges

Universe for Mobile is included in the standard Universe subscription, so there are no extra charges. The minutes you use are from those included in your bundle, so you get great call rates within the UK and overseas.

Great connectivity - Wi-Fi or 4G

Provided you have an internet connection, whether from Wi-Fi or from 4G mobile, you can use Universe for Mobile. Outside or inside, stay connected. For those that absolutely want to make sure they never miss a call, Universe for Mobile can be set to forward to your native GSM number, on the same phone, for the rare cases where you do not have internet connectivity.

No need to carry two handsets

Carrying two handsets around is a nuisance for many people. Why bother when you can get two different phone numbers (your personal and your work numbers) on the one phone? They will be charged separately without you needing to lift a finger. Simply select the app and begin calling for business calls or use the native dialer for personal calls.

Easy to use functions when you are on a call - conference and transfer

Arranging a multiple person outbound conference call is easy with Universe for Mobile. Just select the Add Call button and dial in whoever you need. Transferring a call where you notify the new recipient of the call "Attended Transfer" or send the call unannounced, "Transfer", is easy with the uncluttered menu.

Wide range of in-app functions - from changing your IVR to listening to voicemails

In Universe for Mobile, within the app, you have your favorites list, your calling history, a dial pad, your contacts and many of the administrative functions you have on your computer. Your voice mails for all devices are stored on your mobile where they can be listened to and then deleted. You can switch on or off your different devices and change the settings for all including call forwarding and ringing time before going to voicemail. You can sign in and out of calling groups and change your IVR (Intelligent Voice Response) from one preset flow to another, no matter where you are.

Presence - see if your colleagues are already on the phone

If your colleagues are on the phone, you can see this on your handset and delay contacting them. It saves time for you and lets you get on with what you need to do. Alternatively, choose someone else that is free for the call.

Native and Universe Contact Lists

You choose as to whether you want to use the contact list in Universe or alternatively the ones that are in your phone in the native contact list. Both can be used with the touch of a button.

Features and Benefits of Universe for Call Recording with Firstcom

FEATURE	BENEFIT
Work from wherever you want	You use the same number as your fixed business phone and have most of the same functions. Universe for Mobile allows employees to work seamlessly where it is best for them and the company
Cost Effective	Universe for Mobile is included with the Universe subscription. Bundled minutes are included and you will enjoy great rates
Connect from Wi-Fi or 4G	Access 4G when you are outside buildings and Wi-Fi when you are inside. Universe for Mobile selects the internet source automatically, giving you great coverage.
One handset is all you need	No need to juggle two handsets. With Universe for Mobile on your handset, you can have two phone numbers (personal and business), and two sets of contacts all on the one device
Outbound Conferencing	If you are on a call and need to add another caller, simply select them from your contacts or dial them in. Great for when you need someone else's input to a call
Transfer by direct transfer or attended transfer	Universe for Mobile allows you to transfer calls to another person with or without an announcement. Its all done easily and quickly saving time for you and the customer
Wide range of in-app functions	Rather than wait until you get back to the office to change your Universe IVR settings, or your call forwarding, with the in-app features make these changes on the move
Presence – see who is on the phone	Don't waste time calling people that are already on the phone. With the "Presence" function you can see on your phone who is available to; be called, join a call, or accept a transfer
Use the Universe contacts list or the one from your phone	By selecting which list of contacts you wish to choose you can contact whomever you wish, easily and quickly. No need to check on another phone or look up lists

Contact Us

We would be pleased to demonstrate our product to you at no charge. Simply make contact and ask for a demonstration, we will set it all up and we would be proud to show you what Universe for Mobile can do.
